25X1 1.   Comment. The two sketches made   in January do not indicate any changes   and, therefore, are not attached to the report. The sketches again show the large capacity of Satzkorn GOFG ration supply. The depot has a storage capacity of 28,000 to 30,000 square meters. With regard to the usual load capacity of floors which may be estimated at 1,000 kg per square meter, the floor space reported would be adequate for the storage of about 25,000 tons. Previous observations indicate that the depot is filled to capacity and that ration supplies stored there represent 12,000,000 daily allowances.

25X1 2. [REDACTED] Comment. The following quantities of supply arrived at, or were dispatched from, the depot during the first quarter of 1954:

|          | <u>Incoming shipments</u> | <u>Outgoing shipments</u> |
|----------|---------------------------|---------------------------|
| January  | 357 carloads              | 225 carloads              |
| February | 290 carloads              | 210 carloads              |
| March    | 293 carloads              | 328 carloads              |

The rate of incoming shipments and that of outgoing shipments in January and February continued at the level of the 1953 average. The fact that outgoing shipments in March surpassed the average rate by 100 carloads again confirms that at an increased rate, ration supply is drawn directly from the USSR.
